Connectivity is now standard equipment – Monitoring, controlling & optimising operations has never been easier

The professional and continuous use of data and digital applications potentially increases your performance and efficiency, saves fuel and material, leads to lower CO₂ emissions and improves safety. Aebi Schmidt offers easy, flexible and tailor-made access to your data and applications on its cloud-based platform IntelliOPS – now as a standard for all airport equipment as well as sweeper models in selected regions.

As our mission is to improve the performance of our customers, we offer digital solutions to support efficient processes since more than a decade. Now this offer is no longer an option but standard equipment. All airport equipment and our sweeper models in selected regions are equipped with a modem ex works and, for the duration of one year, a free access to the basic set of functionalities on our IntelliOPS platform.

Either way **you decide yourself** whether you want to activate modem and platform access or not. Should you decide against it, no data will be collected or transmitted.

IntelliOPS: All data & applications on one platform

Make it your own

At Aebi Schmidt we do not talk to you as «a customer». We understand that your requirements are unique. And that's why you decide by yourself if and to what extent you wish to use your data and the corresponding digital solutions. You chose what to do with it:

plan & monitor

control & influence

document & report

automate & optimize

Either way, our digital solutions make sure that you can integrate all of your vehicle and machine brands. They are all accessible on the IntelliOPS platform and can be used on any device.

Benefits

The list of benefits if working cleverly with your own data is almost inexhaustible. Here are just the most important of them:

- ✓ **ecologically** and sustainable operations
- ✓ improved **safety** for all stakeholders
- ✓ improved **efficiency** and operational excellence
- ✓ altogether leading to **less cost**
- ✓ **minimises risks** in general and downtime risk in particular
- ✓ enables to work in **peace of mind**
- ✓ offers **direct control** and influence of operations
- ✓ assures **transparency** to the in- and outside
- ✓ can **automate** a substantial part of the workflow
